

MidPoint-Related Projects

MidPoint is a comprehensive identity management and governance system. But it is also a platform that can be customized, build on and integrated with surrounding world. Therefore it is no big surprise that there are midPoint-related projects that are not directly affiliated with midPoint project (or Evolveum). This page is an attempt to list all such projects that can be interesting for midPoint community:

| Project name | Link | Description |
|---|--|--|
| MidPoint Active Directory live password agent | midPointADPasswordAgent (github) | Password agent for Active Directory. The agent will capture password changes in active directory and send them to midPoint for processing. |
| MidPoint CLI (Python) | midpoint-cli (gitlab) | Command-line interface (CLI) for midPoint written in Python. See Midpoint-CLI in Python |
| Box connector | connector-box (github) | ConnId connector to support box.com. |

Those are independent projects that are not maintained or governed by Evolveum. They have their own maintainer and their own governance. In case of any questions please contact the original authors.
