

# Administration and Configuration Guide

## Preface

midPoint is an User Provisioning tool used to create, modify, delete and synchronize user accounts. This guide describes how to use midPoint as an administrator.

While this guide was written for the midPoint 2.2 "Crius" release, it may still be useful (at least partly) for other releases.

 This text is currently in progress and constantly updated.

## Table of Contents

- [Identity Administration](#)
